The book of Genesis. What is it? Who wrote it? Was it passed down around the campfire for generations before writing was invented? Is it just a bunch of myths?

Or is it one of the oldest written documents in the world? If it is, and if we are seriously discussing the subject of origins with Christians and non-Christians, then we should know more about it.

Professor Donald J Wiseman, formerly Professor of Assyriology at the University of London, Assistant Keeper, Department of Western Asiatic Antiquities, the British Museum and Chairman of Scripture Gift Mission compiled Clues to Creation in Genesis from two of his father's works. Air Commodore (Royal Air Force) P J Wiseman studied the literary forms of the Sumerians and found within Genesis evidence that the first thirty-six chapters (plus 37:1, 2a) had originally been written as a series of eleven histories in cuneiform, the written language of ancient Mesopotamia.

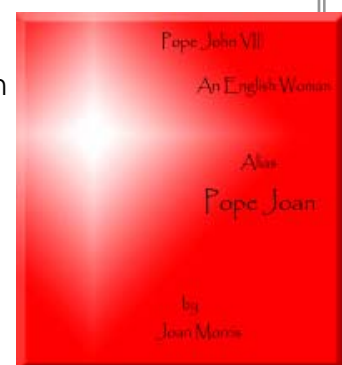

No one can talk intelligently about Genesis and creation without having studied this seminal work.

Clues to Creation in Genesis, by P J Wiseman, edited by Donald J Wiseman

Has there ever been a woman Pope? Yes - is the quick answer. Does it matter? Also yes. In 313 AD, Roman Emperor Constantine took over Christianity and imposed professional clergy, pulpits, sermons and church buildings upon the church. In 497AD, the by-then centralized church of Rome issued an edict ordering all churches to stop ordaining women.

In the 9th Century, an English woman became the leading scholar in Christendom, disguised herself as a man and went after the top job.

In this book, the late Joan Morris tells the story.
